hello

i am naguib waguih chemist work as quality control in LPG plant , i use gas chromatography to make analysis, gas chromatography asxl perkinelmer use above software I want more detail and please explain how to make a development report ,because the manual do not indicate that ,
thank you for your cooperation
naguib waguih

Start with a title, add an introduction which tells the background of your development, so folks can understand where it fits in the global chemistry picture, and why it is important. Put in an experimental method, data, a few results that demonstrate what you want to show. At the end, give a section each for conclusions, recommendations, and a discussion. Some folks will combine those last sections. Give it to your manager to read, and expect a lot of edits back.

Michael
