Hello,

We have created a website about the Steam Distillation or Hydrodistillation of essential oils from well-known aromatic herbs. A new methodology with a point of view from Chemical Engineering is exposed. The next aromatic herbs were studied: wild marjoram, rosemary, spanish hyssop, lavandin, sweet fennel. A new phenomenological modelling had been developed to correlate the data of extraction kinetics. The contents are written in spanish, also there are some texts in english.

The electronic address is:
<http://hydrodistiller.hyperphp.com/>

Best regards.
