Hi,

I have to use this autoclave. There are four keys. I know that 2 are for 134 degrees and 2 are for 121 degrees. I'm interested in 121 degrees: which is the difference between the 2 keys of 121 degrees? How long a cycle of 121 degrees last? I should do 2 autoclaving cycles at 121 degrees.

Thank you,
Andrea
