That's hardly true. Since Philosophers and Psychologist still can't seem to get their head out of their ass, and stop confusing the term "Phenomena" with their idiotic terminology from Behaviorism and the CIA called Epi-Phenomena. So they are advised to turn the TV off, get a real job working with some organization other than Communist China or NAZI Germany and start working with REAL computers rather than their retarded Zero-IQ Bill Gates Golden Parachutes.

That means the brain and its operations

> *as well as computers and their operations.*

The brain is a chemical soup. It's operations are like computers only in the way a bowling ball is like a bowling pin.
