Hello there,

I started ai-philosophy group in an effort to bring together the stimulating, intellectual discussions of AI on comp.ai.philosophy in the old times, without the trolls, kooks and SPAM.

Please consider joining this relatively new yahoo group.

<http://groups.yahoo.com/group/ai-philosophy/>

We have been discussing some recent (by philosophical standards) articles on computationalism, some of which are collected in the book "Computationalism: New Directions", edited by Matthias Scheutz.

I would be especially pleased to see views which endorse Sloman's view that Turing Machines are irrelevant to AI.

Anybody who is seriously interested in philosophical and theoretical discussion about AI is most welcome. There is no moderation, but you must become a member to post [and promise to keep a high standard of discussion :), no flames, insults, etc.]

Best Regards,
