The only ones who need to justify this are those who pay his salary, i.e. the shareholders. The CEO's work is worth as much as they think it is. That's all there is to it. The solw measure for the worth of anything is how much somebody is willing to pay for it.

That happen ONLY because they NEVER worked for that money.

That is your opinion, and an incorrect one.

It is the CEO that took the wealth created by the engineers and delivered it to them as dividends and capital gain.

The engineers and workers create the product, not the market or the infrastructure or the business.

Just give to shareholders ONLY the amount of money they actually earned by doing usefull work, and you will see how much the CEO is REALLY worth then :-)

This is a good recipe for the corporation going out of business and no new ones starting up (which would mean no JOBS and a lot of broke people).

You see, you are too stupid to realize that there is not a magical source of 'jobs'. They companies have to be created, infrastructure and raw materials paid for and products developed. I didn't see the

Re: Top 1% OWNS MORE THAN bottom 90%

workers willing to pay for the privilege of working at the company during start up...they demanded wages even before the product sold and before the company made a profit.

The business owners and the shareholders invested their money to create a business. As such, the profits belong to THEM (they don't have to give the janitor more money just because profits are up..his job is still worth \$8 an hour...would he be willing to only work for \$4 an hour, or even pay the company \$4 an hour to work, if the profits are not there? If not, then he is not entitled to any of the profits.).

Hey, you can share in the profits, all you have to do is invest
