Actually I resubscribed again this year, I still have the first issues from 1972 or so, but I never opened them again, they are stored somewhere in the basement. If some offspring continues my way, he could one day find these mags and reread them. Well, my eldest son(29) is just doing his PhD in EE. You are right, lots of interesting things inside, much better than Circuit Cellar, which is defined to PICs and alike.
