Current VS dissipation isn't where you erred, you stated that
current-hogging was taking place in a series circuit, where currents
are everywhere the same and hogging _can't take place.

>Maybe I could help

That seems a little extreme. Usually all that's required is an "oops"
or an "aaarrghh!" or a simple admission of error.

>sheez....

Fuck you, pinhead. Go to:

<http://www.fairchildsemi.com/ds/2N%2F2N4401.pdf>

and read the absolute maximum rating for collector current, then report back with what you find along with a reference to the article, OK?
