Will an ink jet printer work for printing out artwork on a transparency for PCB exposure? I've been told it must be a laser printer but maybe someone has some experience with this.

Thanks  
Rod.

i find that using photo ink jet paper in my laser printer works well, i iron it on and then hit it with water .. the solution in the ink jet is water based i guess and loosens up real nicely leaving the toner on the copper clad.

i have also did this on clear mylar instead of copper clad. it does work but i find that the heating process sometimes can distort the mylar.
