This concept was also practised by HP. My LaserJet 1100 was having problem with the paper slot. 4 or 5 sheets of A4 sized paper were rolled in making the printer stucked half-way while printing.

I did a search on google and found that HP was giving off free repair kits for those printers with certain models and serial numbers earlier than certain dates. I ordered mine and got my printer fixed. The package was sent by courier from a nearby HP agent.

Allen
