

Simple circuit to generate 12VDC from a 9v battery?

Hello everyone,

I need to generate 12vdc from a 9v square battery, cheaply and simply, supplying about 20mA.

I have looked at DC-DC convertors, but haven't come across anything suitable.

I found this circuit that does something similar with a 555 timer but it can only supply about 12mA. Any ideas how to increase the current capability a little?

Any other simple circuit ideas welcome

Thanks

Marius
