Thanks for all the help...

Kew! Thanks for reporting back!

Any time!

Now I just have to figure out how to attach a parallel port cable to my breadboard... hmm...

Get a piece of ribbon cable, with an IDC DB-25M, and do this:
<http://www.abiengr.com/~sysop/images/AAAahhh!.jpg>

I was afraid of that... but I'm sure I have one of those ribbons in my box'o'computer-junk in the garage...

But be careful to avoid this while tinning those #28 stranded wires:
<http://www.abiengr.com/~sysop/images/AAAARGH!!.jpg>

What did you DO?

Re: ultra-newbie: picking a first microcontroller?

Re: ultra-newbie: picking a first microcontroller?

Have Fun!
Rich

Sho' will...

Mikr
