Hey,

So, I'm trying to ID the components on the board of my cars cruise control board (it's broken). Now some I know, like a component with "R43" next to it is a resistor, or "C12" is a capacitor, "Q16" is a transistor, and "D1" is a diode. But here are a few I don't know and would like help IDing:

"RA3" –

"X1" –

"IC7" – (integrated circuit?) –

That's it. School me!

Thanks,  
Paul B.
