I saw on web that MCM sells a recarboning kit. I assume it is a  
paint

but anyway, I can not find it. The remote has some carbon buttons  
1/16" in diameter which I would like to repaint it possible. Gluing  
tin foil might be hard.

Ideas, links?

Thanks,

Wes

Cheaper just to get the model and buy a new remote, or just get a  
universal remote.

Now this is a change of advice from you when I suggested a new 100W  
resistor....

Depending upon the age of the item a new remote might be unobtainable  
or if it is it will be extremely expensive.

All that time, and the cost of hunting down the crap, and then the  
cost of buying it...

Re: Need source for carbon paint to fix remotes.

OP doesn't waste much time at all by asking here and getting the right advice. Buying the stuff and repairing the existing unit will be far cheaper than buying new or even a universal unit.

Sheesh... my personal time is worth more than that.

You must be flat out being so busy and all that...

doesn't cost the OP anything to get advice and time is probably not an issue as far as he is concerned...
