OP doesn't waste much time at all by asking here and getting the right advice. Buying the stuff and repairing the existing unit will be far cheaper than buying new or even a universal unit.

Sorry, chump, but an hour of my personal time is worth hundreds of dollars, and I don't spend it painting some incorrect media onto what are likely perfectly good conductive pads trying to fix a device that didn't get diagnosed properly.

The greater likelihood is that the PCB pads the rubber keys impress upon have become oxidized. So in all likelihood, he doesn't even know how to fix the device that he doesn't even know how to diagnose the problem of.

Oh and universal remotes are ten bucks cheap. Job done. You lose.  
EndOfLine...
