"Ralf"

\*\* You start by converting your \*requirements\* ( as expressed above)  
into a  
technical spec.

Stops most fools like you dead in their tracks.

When that happens, you ask an expert to do it for you.

Identifying such an expert stops all fools dead in their tracks.

Experts expect to be paid.

Fake ones and genuine ones alike.

Phil.....I suppose an 'expert' like you suddenly acquired all  
this brainpower.....the author  
is simply trying to evolve.....give him a break.

\*\* I did give him a "break" – cunthead.

A fully expert analysis & free advice.

IM – harbouring a fool is a " hanging offence" .

I'll leave a cunt like Ralf \*dangling\* on that one.

Re: Identifying semiconductors to match a spec.??
