"Rob

Could someone explain to me Poles and Zeros.  
What does a Pole do and what does a zero do and how they interact together.

\*\* I have spent countless hours reading about & watching films and documentary stories about of the air war that dominated WW2. However, I have never heard of any confrontation occurring between the Polish air force ( or indeed any Polish WW2 flyer) and a Japanese Zero.

Probably, had a "one on one" showdown occurred somewhere over South East Asia, the Zero would have defeated the Pole.

The Pole would then become attenuated at a huge number of dB per thousand feet – until the poor fellow reached the stop band. Forever.
