Probably not. Why do you want to run it from 12V anyway?

Cheers.

So I can run it off a 12V battery. I suppose I could pick up a DC/DC step-up, or just keep looking for a 12vdc mister, but most of them are 24V and 36V AC, and I'm not really up to wiring on up and getting one that works. It doesn't need to be like the one shown I would prefer one that I could build into a reservoir like the ones in a ultrasonic humidifier.
