Sorry for another stupid question, but, I'm looking at this  
[http://www.maxim-ic.com/appnotes.cfm/an\\_pk/1750](http://www.maxim-ic.com/appnotes.cfm/an_pk/1750)  
and can't figure out whether I can ignore, or whether I need to add in some  
modification of something like this  
<http://www.instructables.com/id/S8Q5N9QFHTAIQK7/>  
where the first diagram says  
" PWM Dimming 0 to 3.3HZ f>15KHz 0%=shdn 100%=20mA "

A clue would be appreciated – especially since I don't know whetehr they  
mean dimming as in a Dimmer Switch on a lamp, or whether they mean  
something entirely different...

Thanks in advance –

– Kris
