Looking for a spice model or subcircuit netlist for the LM709 from National semiconductor. I asked intusoft, cause they have a free model service. I bought their entry level software ICAP/4 8.3.3 from a dealer purchased in 2000. For reasons I won't mention, I was denied the request from their sales department.

I was going to email National, but from what I read in Bob's book "Troubleshooting Analog circuits" he doesn't like S.P.I.C.E. and for good reason.....:)

Any help on this request would be great....

Thanks
Neil
