Like i said before, if one cannot add or delete a part, what use is it? If it worked / works for you, great. It was worse than worthless for me.

Robert,

Computers are remarkably consistent in what they do, geographically. If it doesn't work for you, it is likely that you are using some strange combination of software and hardware. What operating

Re: New query for low cost PCB CAD that *works*

system are you using, and about how old is your computer?

-Chuck

Lemme see now; i run different OSes, on different drives, and prefer to use Win2000, and i have a P5-2200 (GenuineIntel x86 Family 15 Model 2 Stepping 7); 1Gbte RAM.

Hi Robert,

Ok, that sounds like it is within the range of what should work with Eagle.

I presume that you are using a mouse, and not some strange game console to do your point and select?

Also, did you read the instructions, and try the demo?

There has to be a clue here somewhere, as tens of thousands use the program, and find it useful.... and yet you cannot get it to do the simplest most basic of commands.

-Chuck

I use a mouse and the demo did not work either.
I quit beating that dead horse after an hour of wasted time, so forget it and help on the others if you can.
