My thanks to everyone for giving this subject its best airing for a long time.

Do people have strong opinions on which of the budget packages produce the highest quality actual pcb, bugs and bad user interfaces not withstanding. I need 6 layers in total with good control over split planes and DRC and I need it to look good! I only need to use it once as if on the off chance I made any money out of it I would probably buy ORCAD simply because I have used it a lot over the last ten years or so.

Colin
