Hi All,

I am a licensed user of Protel 99 SE and have used it for a few years on several computers. Recently, I bought a new computer and tried to load my software on the machine. It will load but will not allow me to unlock the software. I know I,m doing it right, and the user codes are right I've had the software for several years.

To make sure my computer wasn't faulty, I tried to load the software on a second Win XP machine in the lab. I had the same problem.

I believe the SW disk has been damaged and no longer loads properly. Perhaps having Trend Micro Antivirus and Webroot spyware Sweep is just too much. Has anyone had this problem? Can I get or download a replacement copy? Can't seem to find any help from ALtium.

Thanks,

Fred
