Hi,

I am trying to get my hands on a socket mounted Motorola mc68hc11a1 or mc68hc11e1. I have a Sun Type 5c keyboard, bought for \$1 at the Boeing Surplus Store in Seattle two years ago (had a fun day there), for which I'd like to build an adapter ---schematic found on www.buzzard.org.uk--- to hook it up to my linux box.

I am in The Netherlands, haven't been able to find one here --- out of stock and not current anymore.

Are there any gadgets/applicances or stuff where this chip was used in?

Thanks.
