Hi,

a friend of mine tried to tweak his green laser, but now he fried a SMD part with 65CB printed on top. On other lasers, this componet has 65CA and / or 65CO, so if I take the 65C as fact, could it be that it is the BCW65C transistor ?

Thanks for your help,

Ben – <http://home.planet.nl/~benzandstra> or www.pe2bz.nl
