Thanks for all the replies.

Karl, is correct in that CPC Farnell have the correct item (Karl contacted me via email).

<http://cpc.farnell.com/jsp/endecaSearch/partDetail.jsp?SKU=CN00627&N=411>

FarnellinOne, with whom I have a registration for on-line purchases in Australia don't have them, however.

CPC on-line purchasing is only available to UK registered users and the website doesn't allow me to register from Australia so I can't make a purchase on-line. I have sent a request to CPC asking for advice on how I can obtain their item CN00627.

Thanks again.

I am building up an Elektor project pcb which calls for a pcb mount rca jack from Monacor International (part T-709G)

<http://www.monacor.com/int/en/startseite.html?spr=EN>

(To avoid problems with long url type the part number in the search window to see the part)

Unfortunately, there is no equivalent part having the same footprint from sources in Australia so I am asking for help to obtain the correct part from preferably from the UK (I have a relative visiting Surrey in the next month so they could pick it up or take delivery).

I want to avoid the need to use a panel mount item with connecting screened cable if possible. Monacor in Germany don't accept credit

Re: Help needed – component source

card payments for overseas purchases and the cost of direct payment into their bank account for such a small purchase is prohibitive.

If anyone can help with supplying a qty of 30 pcs let me know and how you would like payment.

(Reply direct via email if you can help)

If CPC is what I think it is (Combined Precision Components), they used to be a separate agency, selling to the trade for repair, usually custom parts for consumer audio and video, and they'd sell to anyone who asks. I don't know if they'd ship abroad though, or what payments they'll take. I think they were based in Preston, Lancashire.

That part does look like something made for a specific commercial run, so this might be the best way to try to get one. I think there is still a CPC that trades independently of Farnell. When I used to buy bits from them I just sent a cheque and they'd send me stuff in a padded bag with a paper order form in for next time. I don't know if UK postal orders can be bought in Australia, but if so, that might be the cheapest way, unless CPC use Paypal or equivalent.
