I have a few tubes of NOS Z8 micros (40 pin DIP) which are mask ROM types containing a Tiny Basic. You can just hook them up to a terminal and code directly. Alternatively you can add external ROM and RAM for bigger programmes.

Anyone interested in these or should I just bin them?

I'll offer something for trade, if you don't want to ebay them. email [rec -at- usbmicro -dot- com](mailto:rec-at-usbmicro-dot-com) with Z8671 in the subject line.

They are (likely) the Z8671. Used to play with these a lot, long ago. Would be a fun trip down memory lane to do that again.

This is what it says on the devices:

```
Zilog Z8  
Z0867108 PEC  
BASIC/DBG  
8828 SR02
```

The last line is obviously the date code and 8671 is dead centre of the second line so it looks like that's the ones.

Ian
