Some utter shite

I tried a few days ago to mail [abuse@xxxxxxxxxxxxx](mailto:abuse@xxxxxxxxxxxxx)  
It took three days for a response, and when it came it looked like a bounce. So either they're all asleep at the wheel or they're a bunch of fakers all.

Is it time to concede that Usenet is a flood plain? Is it time that the repeated spams from certain known regular spammers are to be considered a kind of beginning to a mindless assault on Usenet that forces us to leave it to the flood as it grows to the point where no real population can be maintained?

Don't bother to answer this, it's just a bit of dismal rhetoric inspired by the current weather and politicking in the UK right now, because in some ways what's happening in Usenet is dismally similar.
