Hi Folks,

I need an 8 bit DAC that runs freely (no control lines required...just input parallel data and convert) and can output a 0 to 12V level. Presently the AD7224 I am considering outputs a 0 to 10V out. I guess I would need a voltage amplifier but that requires some more components (which leads to more failure possibilities) and I need to keep the area on the PCB to a minimum.

Any suggestions?

Thanks

Jay
