

Re: Why JFET amp instead of Non-inv Op amp? Do they both not have high Imp?

> management owes it to their stockholders. Or to their next bonus.

I think the main difference may be history. Out here in the wild west EVERYTHING started out private... after all, there was no government.

Water companies were initially all private. Then, as cities developed, multiple private companies were bought out and merged into single-city units.

Likewise electricity. EXCEPT we had a few water districts that were primarily for irrigation water, but discovered that dams also had value to turn turbines and make electricity.

So, when I came to Arizona 43 years ago, all electricity was private except Salt River Project.

By legislation, about 15 years ago now, SRP's electricity capability became "private" in that they were subject to Corporation Commission rules and audits, and they began paying taxes like the private companies.

The other east-west difference, of course, is politicians. Yours are polished and crooked as stumps. And you're so brainwashed you keep electing them... to wit, Teddy ;-)

Our politicians are amateurs. When they do something crooked, they're almost immediately caught, and tossed in the next election, or sooner... like some recall election procedures currently in progress.

And then there's the situation where you THINK you're being overcharged. You just got a "free" ride for years from a government run entity, that undercharged for electricity, and made up the difference with hidden taxes. They do refer to your state as Taxachusetts don't they ?:-)
