Check out alt.horology for nearby clock-repair parts places. It's not clear to me from your description if this is in the movement or in the music box. I think you're talking about the gear which couples from the music box to move the figurines? Entire replacement music boxes run \$10-\$20 (governor mechanisms are like half the price, and maybe that's what you need), entire replacement mechanisms run \$30-\$40 at the low end, and these would probably be a step up in quality from what you have.

Tim.
