Hello Jamie,

go there, they have a whole list of panel meters LCD/LED in the 5 to 9 voltage range using different configs in the range of 12.95 .. 16.00 bucks or so.

<http://www.circuitspecialists.com/>

Thanks. They do have good prices. Much better than Digikey and the other big ones. The specs, ahem, I guess they took a digital camera and photographed the single sheet that comes with the meter. But for test rigs that may be ok.

Regards, Joerg
