Hello Jim,

A smart "young engineer" will put a copy of LTspice on a thumb drive and hang the lanyard around his neck so that he'll never be without that most valuable resource. Smart young engineers of my day, 1950, wore slip-sticks in leather scabbards on their belts for the same reason. 8-)

And then the smart young engineer will see several armed security guards approaching while he is busy plugging a USB cable into the hotel PC.

Note the large glasses on my smiley, whippersnapper. 8-)

In a few I'll trade the glasses against a glass of margarita 8-)

Regards, Joerg
