Malcolm, Barry, Terry and Ken,

My issue seems resolved... TBD

My daughter took me to a flea market where I was able to get four NZ (5vdc - 9vdc) chargers and a rather large 115->230 step-up transformer. I rewired the step-up for stepdown and it looks like it will work for my needs. The five items cost me \$20 NZD; such a bargain. We all have to remember to include those flea markets in our problem solving situations...

I really want to thank all of you again for your input, advice, links, and offer of equipment loans (Barry, yes I'm in CHC).

Bob

PS: Returning to USA/PA next week and still have lots of non-electrical projects to complete before then.

.
