You use the ethernet jack on the computer. Serial port routers are available (I had one for several years before cable became available here). These let you connect modems.

Ther *\*is\** no ethernet connector on my computer, so i will have to see if i can find a serial port router, which i did not know existed.  
Thanks.

there is a free router-project aviabile called fli4l, [www.fli4l.de](http://www.fli4l.de), IIRC there is also some english sides aviavble. One of the (optional) packages allows also a serial Interface for Laptops or other.

Also take a look at [www.ipcop.org](http://www.ipcop.org), which is somehow similar, but I don`t know if there is a serial Interface aviabile...

hth

Will check that out.  
Thanks.
