The fix is: go out and buy a brand new PC, pre-assembled, pre-installed, with a windows office package, such as word, excel etc. And don't even think about being an expert. Just use it. Don't upgrade, don't do any maintenance, don't defrag, don't be smart. Use it. After 4 years, ditch the darn thing, including *everything* (including application software) that came with it, and start all over again.

But you never tried that, did you?

I see that it now has spreaded to cars. In my neighbourhood most cars are pretty new. Perhaps 3-4 years on average. I never see any tow trucks here, expect once or twice for the damned Porsche that belongs to my wife.
