    this has alluded me for a while since
i can not seem to find the temperature
at which the manufactures state their
PTC or NTC. etc..
    for example
    i have a PTC rated for 100 ohms cold!
    now what temp is that?
    hell, it's 55F here in the shack and i
am cold now! does that apply? :)
    just like to know what temp they are
referring to !
```

They refer to 25 DegC, there should be an online translator to be found on the internet, I guess.

Rene
