When you have so many customers that you can't fill the need, so you take on outside help temporarily to take care of the overflow. You know, like "My cup runneth over", but of work?

I'm kinda looking for some stuff where I could telecommute; I know just enough C and perl to get myself in trouble, and can do hobbyist-level electronics – I used to be able to slap together uC circuits, but I don't really have a proper lab these days.

I'm wondering if I should look around for proofreader work, or does anybody bother to have anything proofread these days?

Thanks,
Rich
