But of course. It came with all of the above, BlueTooth, and MSIE which, unfortunately, is presently hung up displaying some kind of .WMF or something...

That's okay--I've still got a plain, old, outdated, old-fashioned 'hammer' to use while I'm holding for tech support on the new one. Oh, and a '486-75 notebook to do real work on. Compact flash harddrives make it dead-silent, with long battery life, and very reliable.

Cheers,  
James
