I'm interested in making a audio out device.

What does that mean ? Could be anything. A thing that goes 'ping' ?

Details ??????

I'm not sure of all the microcontroller port types I'd need to accomplish this.

Port types ? Do you actually know what you're talking about ?

I'd imagine I'd need 2 D/A Converters at least.

Why ?

Does anyone know of any resources to connect all these circuit elements up to the uC as well?

It's called knowledge/experience.

I'm considering dsPIC since it's cheap and many support DIP.
In addition, what's that name for the headphone jack for purchasing on a store like mouser?

If you don't even know that much, you actually aren't any designer.

Re: Audio uC Development Board

Also I'm just curious. It might be that PIC may not have enough for what I need, what would I do if I needed to make a PCB that uses something like a LQFP package microcontroller on it? I can design the PCB but I can't solder the chip onto the board myself

Why not ? I can. QFPs are easy.

is there a
service that'll put the chip on for me for a decent price?
Also where can I find a place for enclosers as well?

You're a troll of the worst kind.

You haven't even the first idea have you ?
