

Good capacitors

Hello all, I'm looking for opinions on capacitors for power and audio filtering. I'd like to replace some electrolytic caps in some old audio gear, so since I'm tearing it apart I want to put something good in there. I know caps are notorious for being very cheap, so I want to know who makes the nice ones. I have a couple different applications:

- power supply filters in a low-power (15W) supply
- audio filter in recording equipment (some of these are ceramics as well)
- tube amplifier caps (I just threw this one in, I am not too hopeful about it)

TIA!

.
