I'm now pissed because I can't get it to work at home with
SuSE
10.0

You're pissed at yourself, retard.

Learn how to read the help provided on the Suse site, and learn how
to edit your xconfig.

Nope, all I see there is how my video card isn't supported under
XFree86 V4 (or some such). There are suggestions about going back to
V3.... but I haven't gotten that far.

If you're so sharp, why don't you show me, oh mighty DimBulb?

First, you need to declare the video card, and bus type.

If it is Nvidia, there is a HOW TO file on the Nvidia site
specifically for Suse.

There is also a suse group here in Usenet, which has SEVERAL threads
with folks just like you that have had their problem solved with as
little as an added line in the config file.

Why do I always feel like I have to redeem myself to all these folks
that spend so much time deriding me?

Re: PsychTest

If my "bulb" is as "dim" as you say it is, why do I feel like a friggin white dwarf among brown dwarfs?

Should light bulbs really be called "dark suckers"? When one is turned on in a dark room, all the dark is sucked away, and all that is left is the light!
