Sorry for the late reply.

Yes, I have to do the project in 8051. I have studied the theory of 8051, but have very little practical experience.

As far as languages are concerned, there is no restriction. I am planning on using C.

I decided to try and implement the Hangman game itself. I have a rough idea as to what I must do, though I am confused as to how to go about it. Could you tell some good resources for 8051 programming in C on the net?

Thanks

.
