I'm willing to bet something under 0.1% of the people who buy that particular meter ever use the more exotic functions such as the transistor hfe checker.

I can't speak for everyone, but myself.....I will NOT use the more esoteric functions. DMM's continue to "do more".....just like cell phones continue to "do more".....so are we gonna see a DMM that also functions as a cell phone? (I don't have a cell phone.)

Did you find the "real" product specs anywhere (accuracy, ranges, etc.)? I'm not seeing them on Sears' web page.

I didn't see detailed specs on website either. But a nearby Sears store says they have 11 of these meters on the shelf, so I'm going over there to do a "touchy-feely"..... I'm curious if the 20 amp DC capability is "continuous" or just "momentary"? I also hope it doesn't use some \$\$\$\$-type rare battery!
