Well, after a lot of online searching, the most interesting DMM I have found, within my desired parameters, is a Sears Craftsman.

It's Sears item # 03482400000 model 82400.

Specs say it has autorange and 20 amp ac/dc current. Now I need to see what kind of batteries it uses. It also comes with a "thermocouple", which I don't need.

I wonder who makes this particular DMM? Probably nobody that I've ever heard of, but I am somewhat comforted by the fact that Sears has a reasonable history of customer service, and this DMM is warranted for 1 year.

The price is \$30.

I bought an HP 3466 4.5 digit multimeter from Ebay for that amount of money (including shipping). Cheap 4.5 digit multimeters are hard to find. To me the HP3466 has 2 major advantages:  
first: it is mains powered which means no more hassle with batteries.  
second: It has an LED read-out which means the reading can be seen in the dark or when viewing the meter from an angle.
