When you do let us know what SW you found useful. I just got ScanSoft's PaperPort that supposedly allows the creation of an increasingly 'paperless' environment. But I didn't get around to trying it yet. Basically a scanning and archiving package.

I had to reply when I saw the mention of Paperport Pro. I have Version 9 which is supposed to be better than Version 10. This product is slow and full of bugs. For instance you can't have more than 200 pdfs in a directory or it will crash. It often crashes anyhow for no reason. Its been years since I've had an app which requires constant Ctrl Alt Delete / End Task.

I will also be more than happy to host your datasheet collections in browseable (Ad free) directories on the DatasheetArchive. With No catches. No Adverts.

For example: <http://www.datasheetarchive.com/yourname/yourdatasheets>

Email me if interested.
