I was typing a datasheet in Word, and it decided at some point to change all my "features" bullets from OK round things to ugly square things. And it now refuses to change them back. And now this 2-page document likes to lock up and freeze Word now and then.

To Microsoft, Bill Gates, and the entire Word team: you code crap.

John

Yeah, but it's done with proper software 'methodologies'. Maybe try saving as RTF and re-opening.

OOPs, very appropriate.

Yeah, maybe I could do that, then cut/paste the graphics. What a pain.

If I turn off the bullets in the features list of the damaged doc (it lets me do that!) and cut/paste the text list into another document, the bullet problem still follows the list! How did they manage that?

John

Re: square bullets

Microsoft knows what you want better than you do ;-)
