Heym,Don,have you checked out the River Rock 0.5W white LED flashlights Target sells for \$10,that run on two AAA cells? (7 hr claimed) They're pretty nice,IMO.

Thats seems like a good combo and life. I was looking at all the Target lights at Xmas. I bought 3 or so brands. For myself I got a 1W Lumiled powered by 3 AAA. Only 2.5 hrs. Nice metal case, but I'm looking for a nice plastic non conducting case for working around electricity.

greg

Just bought an Aurora for about \$25, 1.5W, 2xC alkalines.  
Life about 10hrs.  
Totally excellent buy.  
It's very bright and the machined ally case is superb.
