2. In case of a nuclear strike against us, or equivalent catastrophe, having a radio like this might come in handy. (Better than nothing at all.)

What are you going to listen to?

Whatever comes up. ;)

Once there was a blackout in my neck of the woods (about 2 years ago). I turned on my laptop (powered by a 12V jumpstart battery, plus 110V inverter, plus laptop switching power supply), fired up the dialup connection, logged on to the news... seems like a transformer blew at a substation. Whew. And here I thought the North Koreans were attacking us...

Paranoid. ;)

Michael
