Hello Jim,

In my case it timed out and the manual states that this
modem does not
have any IP address to access it :-(

I think the standard default is <http://192.168.0.1/>

Times out as well :-(

There is a Barricade router in between but since you also have one of
these and if your modem IP address works then I guess my modem really
doesn't have an address. Does that make it homeless?

I misread, <http://192.168.0.1/> is the Barricade Router IP address.

You can read YOUR IP address in the System Status section of the
Barricade Router "page".
